Professional Summary

- **Full Stack Software Engineer – 4+ years of experience** building scalable, high-performance applications with strong expertise in both front-end and back-end development. Proficient in **Python, Java, SQL, and JavaScript** to deliver reliable and efficient software solutions.
- Experienced in developing dynamic, responsive **front-end applications** using **React.js, Next.js, and Tailwind CSS**, creating intuitive user interfaces and dashboards for data-driven decision making.
- Proficient in designing and implementing **RESTful APIs and microservices** with **Flask, FastAPI, and Spring Boot**, enabling seamless integration between applications, databases, and cloud services.
- Hands-on experience architecting and maintaining **cloud-native applications** on **AWS, Azure, and GCP**, leveraging **Docker, Kubernetes, and Terraform** to ensure scalability, reliability, and optimized performance.
- Strong foundation in **security and testing**, utilizing Python-based automation, Burp Suite, and best practices to deliver secure, maintainable, and production-ready applications.

Technical Skills

Languages: JavaScript/TypeScript, HTML/CSS, Python, Java, SQL, PHP

Tools/Libraries: React.js, Next.js, Tailwind CSS, NumPy, Pandas, Seaborn, Matplotlib, Git/GitHub, ETL Tools, PowerBI, Tableau, Unix Shell, VS Code, Docker, Atlassian Bamboo, GitHub Actions, Harness.IO, Terraform, Apache NetBeans, IntelliJ IDEA/PyCharm, Figma, Jenkins, WordPress, Atom, Burp Suite, Wireshark, Postman, Acunetix, Manual Penetration Testing, Firewalls, Adobe XD, Jira, Microsoft Office

Technologies/Frameworks: MERN Stack (MongoDB, Express, React.js, Node.js), WebSocket, Google Cloud Platform, AWS, Azure, Snowflake, Flask, Spring Boot, FastAPI, Kafka, Spark, DevSecOps, OWASP, Bootstrap

Operating Systems: Windows, MacOS, Linux (Kali, Ubuntu)

Experience

Software Engineer, Cloud & Data Systems | NGA Group Inc.

May 2025 - Present

- Engineered and deployed **scalable web and data applications** by integrating **Python, Flask, Spring Boot, and SQL** with cloud-native services, improving performance and reliability.
- Designed and maintained **RESTful APIs and microservices**, enabling seamless communication between distributed systems and reducing integration issues.
- Implemented **Infrastructure as Code (IaC)** with **Terraform, Docker, and Kubernetes**, standardizing deployments and cutting environment setup time by **30%**.
- Developed intuitive, responsive **front-end interfaces** with **React and Next.js**, delivering real-time dashboards that improved visibility into system performance and AI-driven insights.
- Optimized cloud infrastructure on **AWS and Azure**, reducing operational costs by **20%** while ensuring scalability and security for production workloads.

Software Engineer | InfoLabs

Aug. 2024 - Apr. 2025

- Designing, developing, and maintaining high-performance applications using **Java, Spring Boot, and RESTful APIs**, ensuring robust and scalable solutions aligned with business requirements.
- Led **CI/CD automation with GitHub Actions and Harness.IO**, reducing deployment time by **40%** while maintaining high software quality.
- Implementing front-end technologies such as **React.js and Tailwind CSS** alongside back-end solutions like **Flask and MySQL** to optimize full-stack workflows, enhance user experience, and streamline development pipelines.

Software Engineer in Test | Syberbrigade

Jul. 2021 - May 2022

- Developed and executed comprehensive penetration testing plans using **Burp Suite** and **custom Python scripts** to identify and exploit vulnerabilities in web applications, with a **90%** improvement in application security by detecting flaws in real-time with actionable remediation strategies.
- Documented security procedures based on **OWASP**, created a detailed **remediation** approach leading to a **75%** reduction in recurring vulnerabilities through the implementation of best practices in **security protocols**.

- Designed and deployed advanced attack payloads (**SQL injection, XSS**) to uncover critical vulnerabilities, strengthening input validation and authorization. Collaborated with cross-functional teams to address security vulnerabilities, expedite patching, and enhance overall security resilience.

Web Developer | Skillbanc

May 2020 - June 2021

- Automated website object updates by creating **Python scripts and JavaScript**, which resulted in a **70%** reduction in manual update time, optimizing content management and enhancing operational efficiency.
- Resolved critical bugs and user-reported issues, enhancing application stability and user experience by utilizing **Git for version control** and **VS Code for debugging**, ensuring a seamless user interface.
- Optimized website code using **Python**, and **JavaScript** significantly improving load times and overall performance, while implementing best practices for code maintainability and efficiency.
- Conducted presentations on the automation code, enhancing team understanding and enabling smoother integration of automated processes into daily operations.

Projects

Pinterest AI Explorer

- Built a Chrome extension that enhances Pinterest search with real-time **AI-generated query** suggestions using **Gemini API**, improving relevance through **context-aware** recommendations.
- Integrated local memory and Gemini API to provide personalized, privacy-first recommendations while maintaining a lightweight and non-intrusive UI.

CollabSync-Real-Time Document Collaboration

- Designed, developed, and deployed a **real-time collaborative document editor** leveraging **React.js** for an interactive frontend, **Node.js and Express.js** for a robust backend, and **WebSockets** to enable seamless multi-user editing with live synchronization, ensuring an efficient and responsive editing experience.
- Implemented a **scalable backend infrastructure** with **WebSockets** for real-time bidirectional communication, optimizing performance for concurrent users. Deployed the application on **Vercel** for high availability, automated scaling, and fast global access, ensuring minimal latency and a seamless user experience.

Cryptocurrency Price Tracker | Blockhouse

- Developed a **Real-Time Cryptocurrency Price Tracker** using **Next.js, React.js, and React Query**, integrating the **CoinGecko API** to fetch and display live cryptocurrency prices with **optimized data caching** for seamless **real-time** updates. Implemented **Axios** for efficient **API communication** and **Clerk authentication** for secure user sign-in and session management.
- Designed a **Scalable and Responsive UI** with **Tailwind CSS**, ensuring cross-device compatibility and an intuitive user experience. Structured detailed project documentation using **Docusaurus**, facilitating smooth onboarding and future scalability.

Uber Clone NextJS Application

- Developed a **Scalable Uber Clone Web Application** using **Next.js, React.js, and Tailwind CSS**, integrating **Google Maps API** and **React Autocomplete** for real-time location selection and navigation. Ensured a seamless and responsive user experience with dynamic UI components and optimized frontend performance.
- Engineered a **Secure and High-Performance Backend** with **Google Cloud Platform (GCP), Google Cloud Run, Clerk Authentication, and Stripe for Payment Processing**. Leveraged Next.js API routes for efficient data handling and implemented **Google Webmaster Tools** and **TypeScript** for enhanced maintainability, scalability, and accessibility.

Online Store Management System

- Developed a **Scalable Online Store Management System** using **Python, Flask, and MySQL**, designing efficient database structures and SQL queries to enable real-time data processing and seamless transactions. Built **Flask-based APIs** to support data extraction, analysis, and reporting, providing valuable business insights.
- Engineered a **Responsive and Intuitive UI** with **HTML5, CSS, and JavaScript**, integrating APIs for seamless data access and enhanced user experience. Optimized system performance by ensuring efficient **frontend-backend communication**, implementing best practices in **data engineering and security** to enhance scalability and maintainability.

Education

University of North Texas

2024

M.S. Computer Science and Engineering
